

A Requirement Traceability Tool

Kadir Ersoy, Ecenur Sezer

Problem Statement

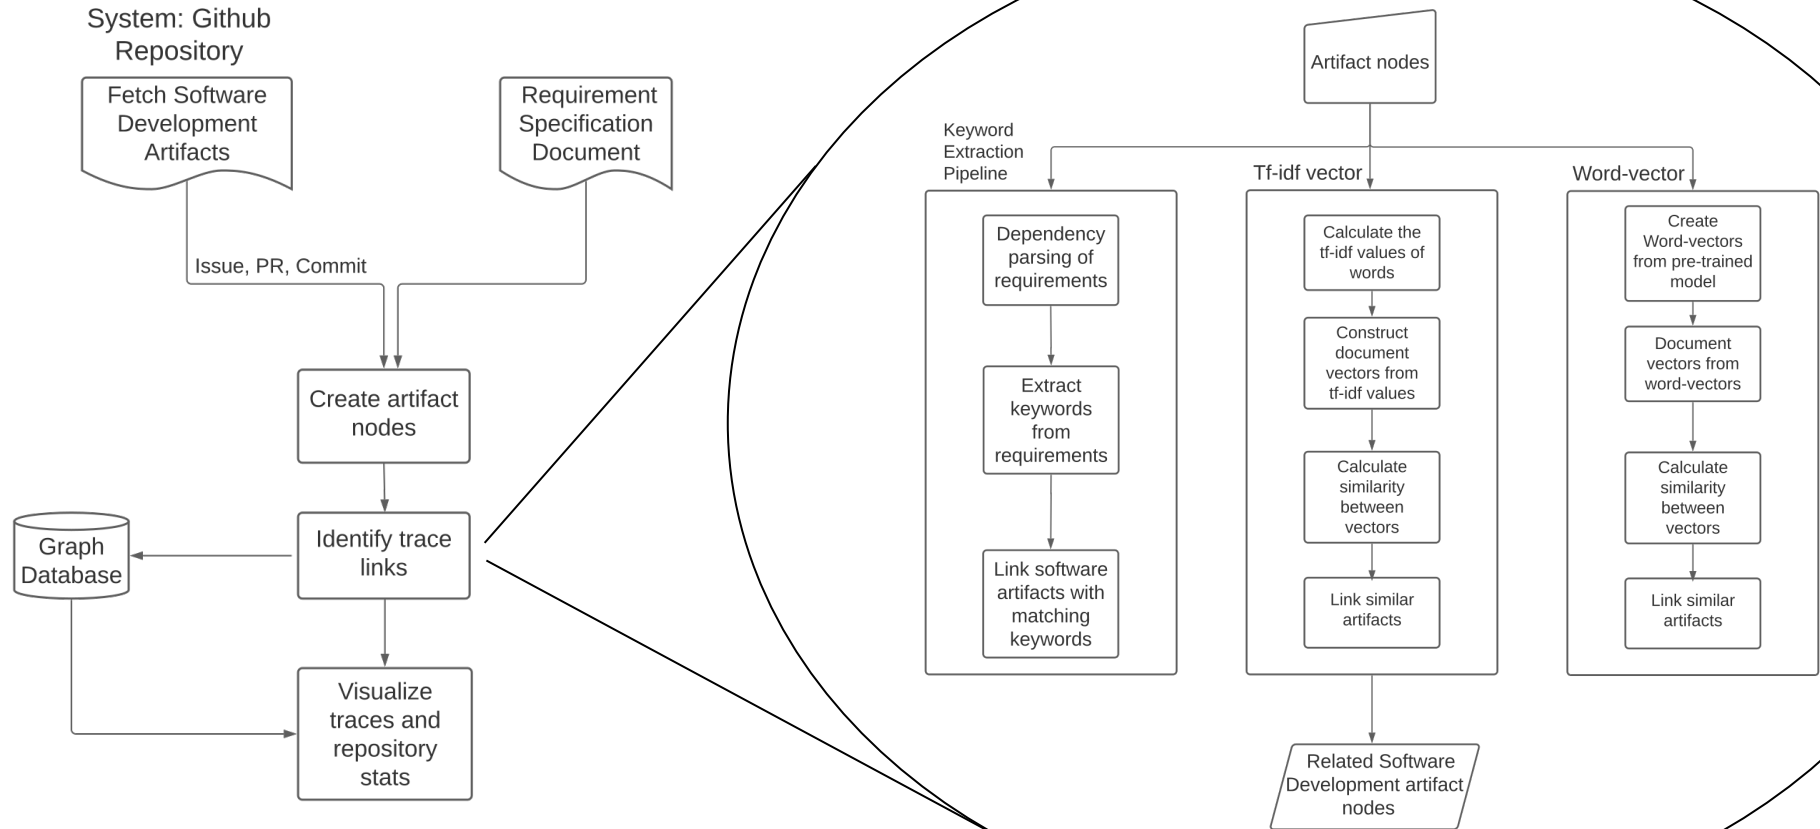

To design and implement a tool that identifies and visualizes the trace links for a software project given the requirements and software development repository.

Motivation

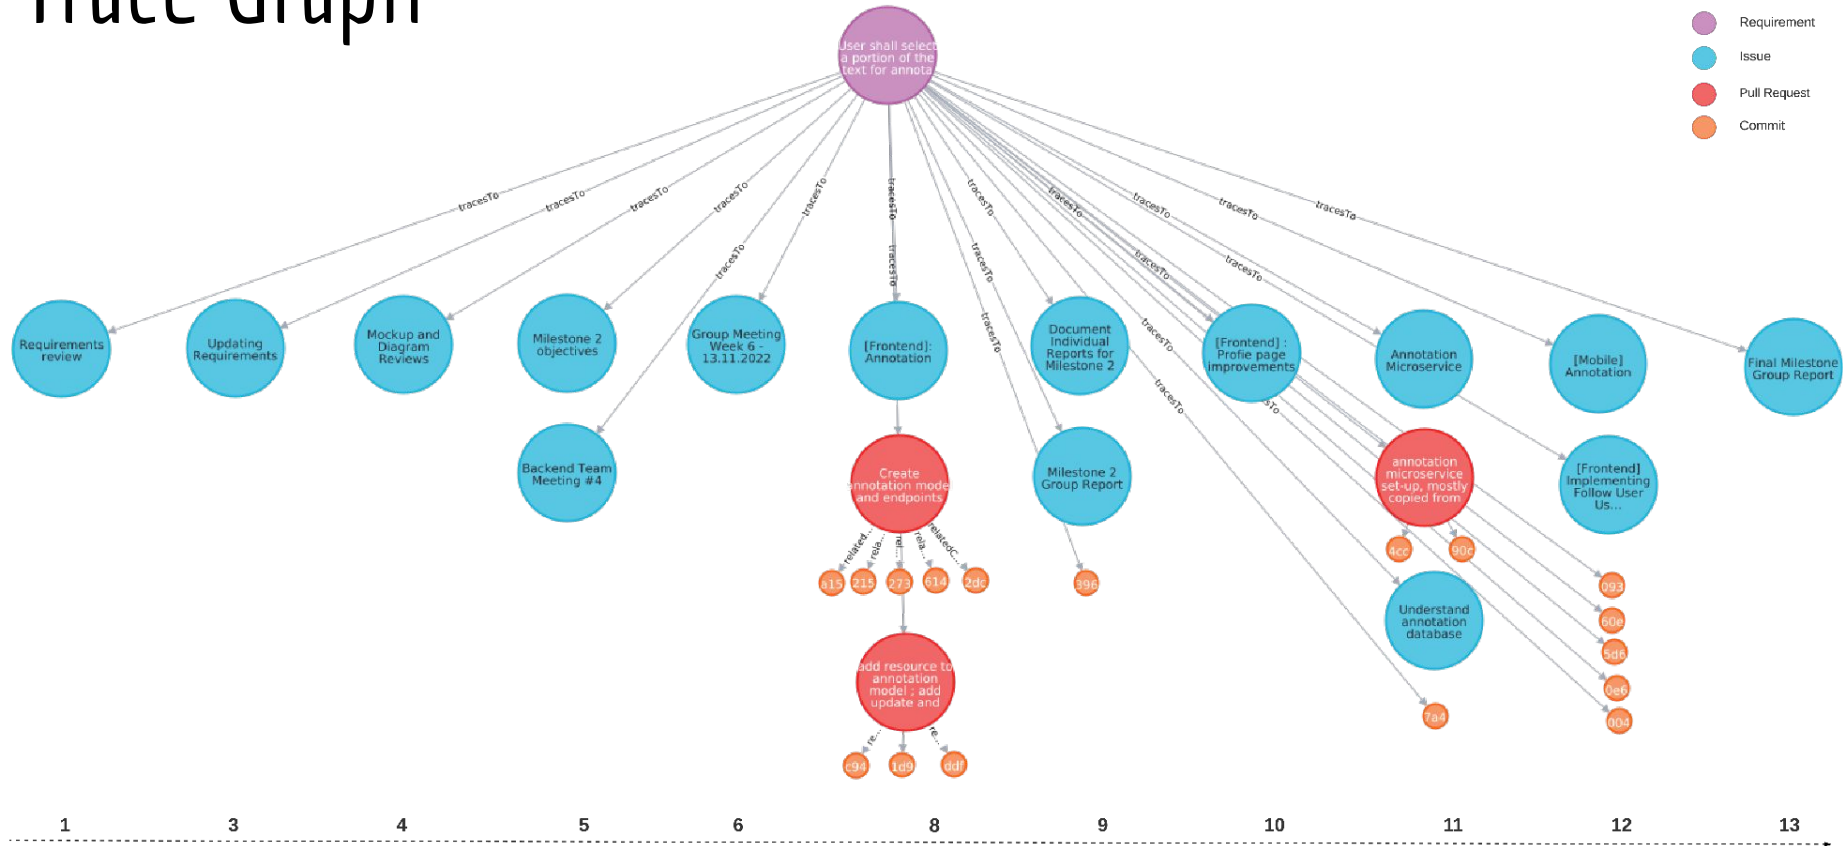

Traditional methods to recover traceability links necessitate significant human effort, particularly as the project scale grows.

By offering automated traceability and comprehensive visualization, our tool aims to enhance the management of requirements and to demonstrate their lifetime.

Control Flow of the System

Requirement Issue PullRequest Commit

Requirement 1

Please type to search requirement description.

Users shall be able to change their password.

Requirement 2

Please type to search requirement description.

Users shall be able to log into their account using their email and...

Requirement 1

1.3.10

Requirement 2

1.1.2.1

Limit for trace chart/graph

Number of traces to show.

30

Results

Method	Recall	Precision
Keyword extraction	0.865	0.212

Table 1: Recall - Precision Values of Keyword Extraction Method

Sim.Threshold	Word-vector		Tf-idf vector	
	Rec.	Prec.	Rec.	Prec.
0.05	1.0	0.043	0.839	0.121
0.15	1.0	0.043	0.573	0.256
0.25	1.0	0.043	0.244	0.430
0.35	1.0	0.043	0.095	0.392
0.45	0.965	0.071	0.025	0.125
0.55	0.865	0.100	0.013	0.121
0.65	0.294	0.300	0	0

Table 2: Recall - Precision Values of Vector-based Methods

Challenges

- The lack of open-source project requirement specification documents.
- Creation of ground truth set for evaluation.

Thank you for watching.
